

# Convergence of the head-of-line experiment models to Model A ( $\lambda_1 = 0.3, \lambda_2 = 0.4, \mu = 1$ )

$B_2^H \rightarrow A$  as  $\gamma_1 \rightarrow 0$  (head-of-line jockeying)

$C_2^H \rightarrow A$  as  $\theta_1 \rightarrow 0$  (head-of-line abandonment)
