

Convergence of the head-of-line experiment models to Model A ($\lambda_1 = 0.3, \lambda_2 = 0.4, \mu = 1$)

$B_2^1 \rightarrow A$ as $\gamma_1 \rightarrow 0$ (head-of-line jockeying)

$C_2^1 \rightarrow A$ as $\theta_1 \rightarrow 0$ (head-of-line abandonment)
